## THE RCC EXPERIENCE

The NYGH Finch Site Reactivation Care Centre (RCC) has inpatient units which include bright rooms, large family waiting lounges, dedicated space for recreational therapy, and spacious washrooms to better accommodate patient needs. Offering a safe, comfortable and pleasant environment for patients and families in our diverse community, interpretation services and cultural food choices are offered in addition to enhanced safety measures to support patient needs including those who wander.

## THE BEST CARE IN THE RIGHT SETTING

The RCC is designed to support patients who no longer need hospital services but would benefit from restorative care before transitioning home or onto their next destination. The RCC model of care includes:

- Restorative Care, Low Tolerance Low Duration (LTLD) and Short-Term Geri Rehab (STR).
- Our interprofessional team includes nurses, physiotherapists, occupational therapists, social workers, physicians, nurse practitioners, and other disciplines.

The RCC is a modern facility offering the right level of care.

## YOUR ROLE IN THE JOURNEY

We recognize the crucial role families play in the recovery process. Your presence, support and encouragement can make a world of difference. Here is how you can be involved:

- Collaborative Care: participate in care discussions and planning with our medical team to ensure a tailored recovery plan for your loved one.
- Family Education: attend informative sessions to learn about the restorative care process, home care techniques and more.
- Emotional Support: your presence can boost patient's morale and contribute to their emotional well-being.
